## GREENWARE

**Our plates are made from bagasse**, a biodegradable and compostable disposable tableware that is made from sugarcane fiber leftover after juice extraction.

Normally, this residue is burned after pulping, thus creating air pollution. But this sugarcane fiber can be re-used - by being made into disposable products. The tableware has no plastic or wax lining applied to it and can be used for both hot and cold items. It is an alternative to tree fiber for paper product production. Bagasse pulp products are available in bleached (white) or unbleached (light brown) options.

**Our utensils are made from PLA (polylactic) resin,**

derived from 100% non GMO (genetically modified organism) corn starch.

Bioplastics are a new generation of biodegradable and compostable plastics. They are derived from renewable raw materials like starch (e.g. corn, potato, tapioca etc), cellulose, soy protein, lactic acid etc., not hazardous in production and decompose back into carbon dioxide, water, biomass etc. when discarded.

**Only \$1.75 per guest**
